Initiative: Building Workforce Readiness Through Lean Six Sigma

Six Sigma Yellow Belt Certification

Earning the Six Sigma Yellow Belt Certification gives students a competitive edge in today's workforce by equipping them with real-world problem-solving and process improvement skills used across industries. Through learning the DMAIC method (Define, Measure, Analyze, Improve, Control), students gain a structured approach to identifying challenges, analyzing data, and improving outcomes - skills valued in advanced manufacturing, healthcare, technology, logistics, and business operations. More than an industry recognized credential (IRC), the Yellow Belt builds critical thinking, teamwork, and professional confidence, signaling to employers that our students are prepared to contribute, lead, and continuously improve in any career pathway they choose.

Six Sigma Yellow Belt District Student Cohort
